CloudSource OA

CloudSource OA gives the library the tools it needs to improve customer service, provide more access and save money by promoting Open Access resources.

Percent of papers that are OA
by year of publication

100% — 2040
67% — 2023
47% — 2015
25% — pre-1995

Today, open access (OA) publishing represents more than two-thirds of annual scholarly article output and constitutes a significant portion of content in high-impact journals. This trend is unsurprising: researchers who secure grant funding from organizations mandating OA publication are often the authors of highly influential, widely cited papers. However, despite being freely available, much of this content remains effectively hidden from those without subscription-based access.

Provide more for less

CloudSource OA is a powerful solution for libraries seeking to expand their collections with high-quality, freely accessible digital resources. It provides:

- A comprehensive index of open access materials
- Robust tools for collection curation
- COUNTER-compliant usage statistics
- An intuitive, mobile-friendly discovery interface

Use CloudSource OA to enhance your digital collections or even replace costly subscription packages.

To help you make informed decisions, we offer a **free collection analysis** based on real-time publication data. This analysis reveals insights your content vendors may not share—such as OA overlap and expansion opportunities at both the package and publication levels. Simply provide a list of your scholarly journal databases and their providers, and we'll deliver a detailed breakdown to guide your strategy

CloudSource OA Unique Features

- Collection of 70M+ OA articles, books, textbooks, and Open Educational Resources (OER)
- Enhanced metadata to support discovery
- Collection Management tools to enable local curation of the collection
- COUNTER-formatted statistics
- Accessible and mobile-friendly discovery envrionment

Other delivery resources
(on-demand, doc delivery, etc.)

CloudSource+ takes your library's digital strategy to the next level by expanding the CloudSource OA index to include closed-access resources from thousands of scholarly publishers—representing nearly 1 billion records.

With CloudSource+, libraries can rely primarily on OA content to meet patron demand and supplement collections with strategic subscriptions, ILL and on-demand fulfillment services. This empowers libraries to start using OA resources to save money on subscriptions while simultaneously providing a better discovery experience and increased access to high-quality content.

Benefits for Patrons

- Search physical and electronic resources simultaneously

- 70M+ OA items available with a single click

- No need to sign-in to access OA items

- Consistent user interface

- Mobile Optimized

- Easy citation bibliography creation

- No dead ends— comprehensive index with ILL and on-demand options

Benefits for Staff

- Focus on shaping collection vs. acquiring collection

- Free up funds to acquire higher impact resources vs. all-purpose databases

- Enjoy greater flexibility to control discovery with collection management tools

- No need to load catalog into discovery solution

- COUNTER statistics for OA usage

- Analytics to gain insight into user behavior and high-demand

Benefits for the Library

- Free up staff time

- Reduce content costs

- Reduce abstracting and indexing costs

- No link resolver needed for OA results

- No need for additional discovery solution

- Greater patron satisfaction with on-demand acquisition model
